Dear Dr 

Re Charley Hooper DOB 
 HAMILTON Gender Female

I have reviewed some xrays that were photocopied on Charley from the 2nd of March 2009. These show that if anything, the spinal curvature has improved since a year previously on the 10th of March 2008 and then subsequently the 25th of August 2008.

This is extremely encouraging. I note the sagittal alignment is almost perfect.

I will see her again in six months time with repeat xrays.

Kind regards

Yours sincerely

Haemish Crawford
